On delivery, the separate pairs are connected together with highquality links for use with a single 2core cable. For single cable connection, leave the links in place and use either pair of terminals on the speaker. Incorrect connection can result in poor imaging and loss of bass. This can improve the resolution of lowlevel detail. Observe the correct polarity as before. When biwiring, incorrect connection can also impair the frequency response. When using spades, fit them under the sliding collar. In order to comply with European CENELEC safety regulations, the 4mm holes in the ends of the terminals are blocked by plastic pins. Do not remove the pins if you are using the product where these conditions apply. Keep the total impedance below the maximum recommended in the specification and use a low inductance cable to avoid attenuation of the highest frequencies. Space behind the speakers also helps to create an impression of depth. Conversely, moving the speakers closer to the walls will increase the level of bass. Even small changes in the position of the speakers or the listeners Even moving large pieces of furniture can have an effect. There's a commendable lack of strain here too, with better than average headroom, and particularly impressive bass which is capable of going deep while remaining crisp and even, providing a firm and propulsive foundation. The top end might be a shade obvious, though it's also notably clean and clear. And although some might prefer a punchier projection, this speaker has the sort of restraint that should suit budget electronics rather well.

One of the great allrounders of this or any other year, the 602 continues to become increasingly refined with each successive generation. All use the same tubeloaded 25mm metal dome tweeter and all feature Kevlarconed, castframe main drivers, so there ought to be plenty of sonic commonality, even though the latter vary slightly in size and configurations. The 602 is a twoway with 20litre enclosure and 175mm main driver, while the 601 uses a 165mm unit in a 14litre box, and the LCR has two 165mm drivers operating as a twoandahalfway in a 28litre enclosure. Finish is vinyl, either in traditional black or the new lighter sorrento. These deliver the warm and cuddly envelopment of the whole musical or cinematic event, and the experience itself provides a strong justification for the benefits of surround sound music. The goodsized centre and surround speakers clearly make a worthwhile contribution towards building up the complete wraparound soundfield, while the meaty 602s at the front deliver weight and drama with little obvious contribution from additional box colorations. However, these So far, so could be forgiven for asking The forceful But when I Switch to multichannel, its natural, beingthere timbre. Presence is Remember that you can also share the solution. Fish don't just sit in the tank and remain at a specific temperature. They will go from place to place and fish have to be set in the ideal temperature for it to thrive. So the first level of the fishbone diagram is that the fish and this really is the simplest aspect of the fish tank. Fish require a particular water temperature, which can be determined by analyzing the water to find out what temperature matches them. Once you know the water level and temperatures another step is the fish and this is the point where the two-level fishbone diagram comes in to play. Fish don't all have exactly the same size. The magnitude of a fish is based upon the size of its own organs, so they all have various volumes so the water flow differs to that of an air.

The volume of the fish will be directly proportional to the water rate. This usually means that the strain in the fish tank will be greater due to the water moving faster. The next degree of this fish is that the habitat of the fish. In the event of marine fish and plants, it also includes the animals which live in the water such as corals, molluscs, and other household things. The next level of this fish would be that the heaters which help to maintain the temperature of the water. It's generally a filter that eliminates the impurities. When you buy the filters, then you need to guarantee they are certified to be used with fish. The previous area of the fish would be the air in the tank. You want to check to find out what sort of atmosphere is available. If the atmosphere is a negative item, then you need to replace the air.
